# Utility Marking, Splice Vault, and Test Station Products

## Who we are

Carsonite was founded in 1977 by engineers who were involved in the development of advanced composite materials for the U.S. space program. They turned this advanced technology toward cost-effective, safety-oriented marking products for the highway, utility, and recreation industries.

## Why Carsonite?

Proven to withstand repeated vehicle impacts, our markers and delineators remain the best, and they are the industry standard. Even our competitors acknowledge our superiority, claiming “as good as Carsonite.” Fact is, few take the extra steps and use the technologies we employ. To be sure you truly get Carsonite quality, just buy Carsonite.

With decades of experience, Carsonite holds many patents on products as well as the processes that produce them. We know our products perform, because we test them, year after year.

Our expertise also comes with a commitment to excellence in customer service. For example, we make instructional videos available to train field installation personnel—just one of the many extra steps we take to ensure customer satisfaction. This all boils down to just one thing: Carsonite is the originator, the innovator, and the quality supplier of choice for your utility.

## We are 811 savvy

As our industry moves toward the 811 standard, Carsonite is ready, and we can help you with the transition.

# Featured NEW PRODUCTS

Carsonite sets the industry standard, and genuine Carsonite markers give you impact resistance, innovative design, and durability that you can get only from Carsonite.

Specifications

## HIGH PERFORMANCE UTILITY MARKER®

All-purpose marker with supreme tolerance for repeated vehicular impacts at highway speeds.

**NEW!** You can get this level of performance and durability only from Carsonite. Our new High Performance Marker rolls all of our sophisticated composite technologies into an outstanding marker that stands up to the worst case scenario: multiple, highway-speed vehicular impacts, and controlled ditch burns.

When struck, this marker rebounds to serve again, so your lines won't go unmarked simply because someone hit the marker. The High Performance Utility Marker is the right choice where impacts are likely. Add custom or standard decals for buried utility lines, and day or night visibility. All genuine Carsonite markers withstand impacts. This one takes it to the next level.

Material	Composite, High Performance Construction
Width	3.75" (9.53 cm)
Lengths	60", 62", 66", 72", 78", 84", 96"
Weight	152.4, 157.5, 167.6, 182.9, 198.1, 213.4, 243.8 cm
Colors	1.90 lbs. (0.86 kg) (62")

Product #	CHP30 _ _ _ _

## SURVIVOR® PP

### Surface-mounted Survivor®

**NEW!** Carsonite's popular, durable Survivor now comes in a model that easily and quickly surface mounts to concrete or other paved surfaces. Use it for crowd flow, parking lot lane marking, and other places where vehicular impacts are probably going to be low speed, and direct tire rollover is limited.

This product's tough, ultraviolet-resistant plastic polymer post withstands high-speed impacts - even 65 mph and tire rollover! The surface mount base also resists impacts and tire rollover. The marker will survive cold weather extremely well.

## CHANNELIZER® PP

### Surface-mounted Channelizer®

**NEW!** Specifically designed for temporary applications such as construction zones, this surface-mounted marker minimizes workers' exposure to danger because it installs easily, and replacement is simple. The Channelizer PP's new low-profile base enables the post to withstand repeated vehicular impact.

Available in flat or round styles. Use round for applications requiring 360-degree visibility. Use reflective sheeting on the flat Channelizer PP for lane delineation around work zones.

## GREENLINE® PP

### Surface-mounted marker

**NEW!** GreenLine® PP Surface Mount Markers are made of tough, recycled plastic polymers. They withstand repeated vehicle impacts and are ideal for marking and identification on hard surfaces. These posts are excellent choices for parking lots. They install easily with epoxy or mastic pad.

Carsonite's GreenLine products are made from recycled materials. Replacement posts (without bases) are also available. Not recommended for temperatures below 32° F (0° C).

UTILITY MARKER®

Low-cost, all-purpose marker  
for cables, pipelines

For high visibility and easy identification of underground utility lines, the Carsonite Utility Marker is the perfect choice. This trademarked three-rail design combines structural integrity with above-ground flexibility, as well as protection for decals. Easy to install and lightweight for ease of transportation.

Anchors (sold separately) make it virtually impossible to remove the posts without proper equipment. The marker is highly resistant to vandals. Our special composite material will survive multiple small-caliber gunshots without significant loss of legibility or damage to the post. Add custom or standard decals for buried utility lines, day or night.

HIGH IMPACT SURVIVOR®

High performance marker  
for high impact areas

Carsonite's tough, ultraviolet-resistant plastic polymer creates the most impact resistant markers available—even at 65 mph! The metal U-channel anchor drives into hardpan and rocky soils that other markers cannot. No pilot hole needed. Use manual or power driver.

The factory assembled unit makes the Survivor one of the easiest delineators to install.

The marker's semicircular shape allows direct tire impacts, and it survives cold weather extremely well.

## CURV-FLEX® MARKER

Passed NASHTO and SASHTO vehicle impact testing

Our most flexible composite marker. Recommended for areas where vehicle impacts are likely. The trademarked curve and flange profile, along with special fiberglass reinforced material, allows this marker to withstand controlled ditch burns, even direct tire impacts and return to its upright position.

Often used for single or dual-sided identification to mark culverts, utility lines, fire hydrants, and electrical station outlets. In dense soil conditions the Curv-Flex may require a small pilot hole before installation using Carsonite's PDR1 Driver.

## DUAL SIDED MARKER

Durable and attractive two-sided marker

The durable Carsonite Dual Sided Mile Marker accepts a decal, numbers, or other information on both sides. It installs easily, and being made of composite material, easily withstands harsh environmental conditions and controlled ditch burns. The marker rebounds after impacts, and is resistant to vandalism, UV exposure and extreme temperature changes.

Ideal for dual-sided marking of direct buried utility services. The raised, reinforced ribs along each side prevent scratching or removal of legend if impacted.

## UTILITY ID POST

Excellent for pedestals and enclosures

The Utility I.D. Post is ideal for identifying hard-to-see utility fixtures, pedestals, hydrants, valves, rights-of-way, and more. Highly visible colors and warning decals make your message readily visible, even amid overgrown vegetation or drifting snow.

The Post has a back rib for structural strength, rigidity and ease of installation. Virtually unaffected by harsh climates, this all-purpose economical marker can help reduce maintenance costs associated with pedestals and enclosures in areas where impacts are unlikely.

## PEDESTAL MARKER

Versatile, durable, and visible

This triangular shape is visible from any angle. Helps prevent damage to telecommunications and CATV pedestals caused by mowing, plowing or maintenance equipment. Helps locate pedestals in areas of deep snow or dense vegetation.

Standard and custom decals are available. Add sheeting for additional nighttime visibility. Mounts directly on the pedestal using the bracket assembly, which allows quick and easy attachment without drilling, preventing damage to the pedestal contents.

## SNOWPOLES

High Visibility in all Snowscapes

Thanks to their bright colors, Carsonite Snowpoles provide a highly visible guide for motorists, snowplows, and emergency vehicles. The Snowpole flexes when covered with snow,

returning to its upright position without bowing or becoming brittle.

The triangular shaped post can be installed in existing metal U-Channel by using a rubber grommet (sold separately). Add reflective sheeting for a more visible nighttime display. Custom decals are also available.

## GREENLINE® MARKERS

### Single-Curve Marker

### Double-Curve Marker

### General Purpose Marker Flat

The first family of markers made from post-consumer recycled plastic, Carsonite's GreenLine products offer high durability and impact resistance. We offer a choice of profiles in brilliant colors that resist fading - UV stabilizers and colorfast pigments for years of trouble-free service. Other colors are available on special order with a minimum purchase requirement.

The GreenLine Single-Curve Marker is a highly flexible post featuring a simple, curved design that bends easily to withstand direct tire impacts and vehicle impacts at highway speeds. Decals or reflective sheeting can be applied to both sides.

Installs easily in all types of soils with optional U-channel anchor. Use for marking in areas where vehicle and equipment impacts are a concern. Lightweight material allows easy transportation.

RUS Approved. Not recommended for temperatures below 32° F (0° C).

Flexible yet wind resistant, the GreenLine Double Curve Marker provides multiple reflective angles for enhanced visibility. It easily withstands multiple tire and vehicle impacts at highway speeds. Add reflective sheeting for nighttime visibility.

Installs easily in all types of soils with optional U-channel anchor. Not recommended for temperatures below 32° F (0° C).

Carsonite's GreenLine General Purpose Marker is a simple, flat marking post designed for economically identifying utility locations, supporting rural "9-1-1" programs, and performing many other useful functions. Not recommended for temperatures below 32° F (0° C).

SURFACE MOUNTED  
MARKERS

Carsonite's RUS-approved Sentry® post withstands repeated vehicle impacts.

Add stock or custom warning decals to get your message across loud and clear.

UTILITY SENTRY®

Excellent visibility;  
Flat or Round Styles

Designed for tough soil conditions and areas where vehicle impacts are likely, the Sentry® post provides excellent visibility. It is available in round or flat top styles, and its sub-surface anchor allows quick removal and replacement of the marker, to lower maintenance costs.

Made from high-impact polymers, the post comes in vibrant colors, pigmented throughout the post for positive identification of buried utilities.

TUFF-FLEX®

Designed for two-sided  
messages

Our most rigid post allows the placement of decals on both sides. The specially engineered design gives the

Tuff-Flex®  
marker  
the

ability to flex if

necessary, yet stay rigid enough to be manually driven into hard soils.

The recessed surface protects the warning and identification decals. Made from Carsonite's fiberglass reinforced composite material, Tuff-Flex is designed for years of outstanding performance in harsh outdoor conditions.

## VISIBILITY ENHANCER®

### 360-degree Sleeve

Install a 360-degree visibility marker without digging! Carsonite's Visibility Enhancer combines the driveable Utility Marker, High Performance Marker, or Dual-Sided Marker with a rugged, 20½" polyethylene sleeve. Simply drive the marker and fasten the Enhancer using the supplied pop rivets.

Available in White, Yellow, or Orange, the Visibility Enhancer is perfect for intersections, medians, etc., and you can add reflective sheeting for supreme nighttime visibility. The decal area is 16" high.

## VISIBILITY ENHANCER® UNIT

### CRM Utility Marker Included

When ordered as a unit, the Carsonite Utility Marker comes factory-drilled for even easier installation of the Visibility Enhancer. It's the perfect choice for 360° identification of underground utility lines. Our trademarked three-rail design combines structural integrity with above-ground flexibility, as well as protection for decals.

Because it's virtually impossible to remove without proper equipment, the Carsonite Utility Marker is highly resistant to vandals. Add custom or standard decals for extra visibility, day or night.

## RETRO FIT ENHANCER

### Slip-on and Secure for existing posts

The quick and easy way to keep your company information current, avoiding federal fines, is with Carsonite's Retro Fit Enhancer. It's a simple, cost-efficient solution to changing company identification on utility markers. Simply slip the Retro Fit Enhancer over an existing LineMarker, Flat Top Line Marker, or Visipost, and secure it with screws or rivets.

MARKERS AND  
TEST STATIONS

Carsonite maintains an extensive line of test stations and related products for utilities.

ECONOFLEX®  
For Rural Applications

Carsonite's EconoFlex posts easily handle marking jobs in areas where vehicular impacts and other hazards are less likely. They will withstand much abuse, and even low-speed vehicle impact, but not as much as our premium lines.

These markers are excellent choices for rural areas and similar applications. Add standard or custom decals to get your message across inexpensively.

GUARD POST COVER  
Inexpensive Solution

The Carsonite Guard Post Cover is an inexpensive solution to maintenance and visibility problems without having to paint guard posts. They offer a permanent, bright yellow surface which helps to alert people to potential dangers in and around loading docks, hazardous equipment, electrical distribution, parking facilities, and gasoline dispensing and storage areas.

Simply slip the cover over the guard post and secure it with the supplied vandal resistant hardware for a clean, highly visible, finish. Add reflective sheeting for added visibility.

## PERMA-POST® MARKER

### Convert to Test Station When Required

The Perma-Post® square marker has a wide (4-inch) decal surface to draw attention to warning and caution messages. It is available with standard or custom decals factory applied. Also available as a Test Station.

The Perma-Post is made of fiberglass reinforced composite materials, so it is flame retardant and ideal for areas with extreme temperature changes. It will never rust, rot, or corrode, and insects won't attack it.

## PERMA-POST® TEST STATIONS

### Perma-Post® CU Test Station

Our renowned Perma-Post® Test Stations have a wide (4-inch) decal surface to draw attention to warning and caution messages. Available with cathodic protection or bonding and grounding options, the station is a highly visible marking post. The Perma-Post weighs in at only two pounds per foot, so it is easily transported and installed. The internal test station components do not get as hot as metal test station posts, making it safer for workers in the field.

Provides test access for underground cathodic protection. Composite terminal housing fits flush with the Perma-Post Marker, concealing the terminal board. Shipped ready to install, the Perma-Post CU Test Station includes a standard top-mounted 11-hole terminal board, vandal resistant terminal hardware (unassembled), two cathodic protection identification decals, and two Federal tamper warning decals.

### Perma-Post® Telecommunications Test Station

Designed for bonding and grounding applications, this Perma-Post is equipped with a standard top-mounted six-hole terminal board with buss bar and vandal resistant terminal hardware (unassembled). Visible from any direction, it can accommodate up to four warning decals for positive identification.

CATHOD-O-FLEX MARKER  
Impact Resistant Test Station

TRACE-O-FLEX MARKER  
Impact Resistant Test Station

Carsonite maintains an extensive line of test stations and related products for utilities.

Carsonite added terminal points and wire connections to our most popular utility marker to create this innovative design. Ideal for locating and testing underground lines, the Cathod-O-Flex test station marker comes standard with a cathodic protection test station identification decal. Optional #12 AWG wire can be installed at the factory.

Carsonite has added terminal points and wire (optional) to our most popular utility marker to create an alternative, yet innovative design. Ideal for locating and testing underground lines, the unit comes standard with a Trace-O-Flex test station identification decal. Optional #12 AWG wire can be installed at the factory.

Replacement terminals are available.  
Order # CATCOPTER.

Replacement terminals are available.

## TUFFCAT™ MARKER

### Dual-Sided Marking

This innovative test station houses two terminal access points and wire connections for cathodic protection testing or cable tracing. Designed for easy installation, the TuffCat™ provides two surfaces for warning and identification decals.

Replacement terminals are available. Order # CATCOPTER Optional #12 AWG wire can be installed at the factory.

## LINEMARKER®

### Original Round Top

The LineMarker has a 3.5" white post with a 3.8" enhancer for maximum visibility. It's supplied with a T-anchor for protection against removal by vandals, plus a domed cap that keeps dirt, moisture and insects out of the tube. Ideal for marking underground facilities and rights of way. The LineMarker is made from tough, impact resistant thermoplastic elastomer, and it has proved itself in the field for many years, resisting impacts and environmental conditions. It's available with UV-resistant direct graphics or decals. Also available as a telecommunications or utility test station (see page 17).

### Flat Top

The Flat Top LineMarker delivers all of the advantages of the original LineMarker at a reduced cost. The Flat Top's simple design, with a 3.15" diameter white post and a 3.5" diameter enhancer makes the difference, with reduced materials cost. It's supplied with a standard T-anchor and a flat cap. Made from tough, impact resistant thermoplastic elastomer, it has proved itself over and over again for many years. It's available with UV-resistant direct graphics or decals. Also available as a Utility or Telecommunications test station. (see page 17)

Specifications

VAPORGUARD™  
Virtually Maintenance-Free  
Venting

The perfect companion to the LineMarker® or Flat Top markers, Carsonite's VaporGuard™ protects pipelines from the hazardous effects of moisture and gas build up. The VaporGuard styles are designed to fit on any 3.5" I.D. or 3.0" O.D. pipe, and include a molded vent that won't rust or break off. Virtually maintenance free, VaporGuard will never rot or corrode, and it's the easy answer to your venting needs.

VISI-POST PP  
Surface-mounted

**NEW!** Carsonite's surface-mounted Visi-Post has a 3.5" outside diameter for maximum, 360-degree visibility, and ample room for warning and identification decals. The post is supplied with Carsonite's new low-profile surface mount. The post will withstand low-speed vehicular impacts. A permanent, black cap that keeps dirt, moisture and insects out of the tube is also supplied.

The Visi-Post PP is a great choice for marking underground facilities on concrete or other paved surfaces, or for parking lots, crowd control, or other applications where highway-speed impacts are less likely. Constructed of tough thermoplastic elastomer, the Visi-Post PP is designed to withstand years of harsh outdoor exposure.

## VISI-POST

### Ideal for Marking

Carsonite's Visi-Post has a 3.5" outside diameter for maximum, 360-degree visibility and ample room for warning and identification decals. The post is supplied with a factory-applied, metal anchor barb to prevent rotation, as well as a permanent cap that keeps dirt, moisture and insects out of the tube.

The Visi-Post is ideal for marking underground facilities. Constructed of tough thermoplastic elastomer, the post is designed to withstand years of harsh outdoor exposure. Also available as a test station.

## VISI-POST TEST STATIONS

### Cathodic Test Station 360-degree visibility

The Visi-Post Test Station is an economical solution with 360-degree visibility and performance that has long been proven in harsh outdoor exposure. The Visi-Post features two exterior terminal access points and wire connections for cathodic protection testing or cable tracing. The post is vented to reduce internal moisture, and it's non-conductive. Light in weight, it's also easy to handle and install. Customize it with your warning decals and your specific application. Includes brass bolts, nuts and washers.

### Telecommunications Test Station 360-degree visibility

The Visi-Post Telecommunications Test Station is an economical solution with 360-degree visibility and performance that has long been proven in harsh outdoor exposure. The Visi-Post features two exterior terminal access points and wire connections for cathodic protection testing or cable tracing. The post is vented to reduce internal moisture, and it's non-conductive. Light in weight, it's also easy to handle and install. Customize it with your warning decals and your specific application. Includes brass bolts, nuts and washers.

Your corporate identity and logos can be placed on any Carsonite marking products, including special colors, blends, and graphic designs. Our state-of-the-art processes yield permanent, UV-resistant displays.

SIGNS

Stock and Custom Made

Carsonite’s high performance composite signs are made from 0.90” or 0.135” fiberglass reinforced composite material. All signs have rounded corners and we will drill them in standard or customer specified hole patterns.

Signs are available in reflective or non-reflective styles. Composite signs are available from 3” x 3” to 48” x 96”. An extensive selection of standard signs

is available for parks, recreation, utility, airport, parking, and highway applications.

SIGN SUPPORT POSTS

Maximum Durability

These composite posts are ideal for mounting Carsonite composite signs. The system is capable of withstanding several highway-speed vehicle impacts, and will easily resist all environmental factors - cold weather, moisture, salt air, even diesel fumes and chemical-laden air. The posts are drilled at the factory for easy sign installation. When purchased with Carsonite signs (sold separately), vandal-resistant hardware is supplied.

## CARSONITE TEST STATION ACCESSORIES

### Telecommunications Test Station

The Telecommunications Test Station is perfect for tracing non-metallic pipelines and identification of force mains and pressure valves. It provides highly visible marking and easily fits pipe or tube from 2.375" to 3.5" O.D.

Excellent with Carsonite's High Visibility Posts, available with warning decals. Includes six nickel-plated brass lugs on an eight-hole terminal board. Fits Carsonite Flat Top, LineMarker, and Domed LineMarker posts. Sold separately or with posts.

### Cathodic Protection Test Station

The Cathodic Protection Test Station mounts easily on pipe or tubes from 2.375" to 3.5" O.D. It includes five nickel-plated brass lugs with fiber washers on an eleven-hole terminal board.

A buss bar is optional. Choose cap color. Sold separately or with posts.

### Cathodic Protection Test Station (Small)

The Cathodic Protection Test Station mounts easily on pipe or tubes from 1.75" to 2.25" O.D. It includes two nickel-plated brass lugs with fiber washers on a three-hole terminal board. A buss bar is optional.

Choose cap color. Sold separately or with posts.

## FULLY ASSEMBLED SCEPTER™ TEST STATIONS

### Cathodic Protection Test Station Assembly

Carsonite's most innovative test station accessories are available fully assembled with Carsonite's round high-density thermoplastic posts. These products are ready to install on your site and come with nickel plated brass lugs, fiber washers and terminal boards appropriate to the application. Specify Test Station color. Designed for years of outdoor exposure. Buss bars are optional.

The Cathodic Protection Test Station includes five nickel-plated brass lugs with fiber washers on an eleven-hole terminal board. Fully assembled on white 3.5" O.D. post with flexible T-anchor. Test stations are also available separately.

### Telecommunications Test Station Assembly

The Telecommunications Bonding and Grounding Test Station is mounted on a white 3.5" O.D. post with flexible T-anchor. It includes six nickel-plated brass lugs with fiber washers on an eight-hole terminal board.

### Utility Test Station Assembly

The Utility Test Station is fully assembled on a white 2.25" O.D. post with metal anchor barb. It includes two nickel-plated brass lugs with fiber washers on a three-hole terminal board.

### Small Diameter Utility Test Station Assembly

The Small Diameter Utility Test Station is fully assembled on a 1.75" O.D. white post. It includes two nickel-plated brass lugs with fiber washers on a three-hole terminal board. Post accommodates two 2.375" or one 2.875" decals.

## DECALS, LETTERS AND NUMBERS

Stock or Custom Made

Carsonite's graphics department manufactures decals to order using a highly specialized, state of the art process that results in a tough decal that stand up to harsh environments.

Our decals start with top quality vinyl or reflective pressure sensitive material. We then use outdoor quality, UV-resistant materials and pigments to print your message on the decal. The process is completed by embedding the graphics under a protective laminate called UV Shield®, which provides resistance to weather, graffiti, vandalism, and fading.

We use state-of-the-art equipment throughout the process to ensure a quality job that meets your specifications and imposes as few limitations as possible to your creativity. Your corporate, park, DOT, or other logos can be faithfully reproduced.

### LETTERS AND NUMBERS

These ready-made alphabets and number sets meet the Federal Highway Administrations' specifications. Available in non-reflective black or reflective white, they come in 1" to 4" height. Letter/number kits are also available.

See description

## REFLECTIVE SHEETING

### Enhance visibility

Many Carsonite products feature recessed areas specifically designed for sheeting applications. These recessed surfaces protect the sheeting from damage during impacts. The sheeting products are sold separately. Application of the sheeting to all products is available, prior to shipment from the factory, at no additional charge.

Carsonite offers grades and colors of sheeting to suit your application.:

#### ENGINEER GRADE

For use where maximum brightness is not required, such as rural areas and parking lots. Candlepower ratings: White, 70; Yellow, 50; Orange, 25.

#### HI-INTENSITY

For use where maximum brightness is required, such as urban areas, construction zones, warning signs and roadside delineation. Candlepower ratings: White, 250; Yellow, 170; Orange, 100.

#### DIAMOND GRADE

For use where maximum brightness is required, like urban areas, construction zones, warning signs, and roadside delineation. This sheeting features higher candlepower than Reflexite and exhibits higher angularity. Not recommended for application to any curved surface. Candlepower ratings: White, 800; Yellow, 660.

Use Engineer, Hi-Intensity, or Diamond sheeting on composite type products such as: Roadmarker, Curv-Flex, Milepost, Boundary, Guardrail, and Hazard markers, as well as Modular Guidance Systems. Use Flexible Hi-Intensity Sheeting with thermoplastic type products like Survivor, Super Duck, Super Duck II, Island Sentry, and Visibility Enhancer. Flexible sheeting is also advised for our composite Snowpoles.

Prismatic sheeting will be available soon. Call Customer Service for details.

MISCELLANEOUS  
AND TOOLS

Carsonite makes it easy.  
Our tools are designed to  
make short work of any  
job.

MARKING FLAGS

High visibility and excellent  
durability for safety

Carsonite offers a full line of highly visible, safe, and durable flags for temporary marking of utility lines at construction sites and work zones. Our full line of flags makes identification quick and easy. Made from weatherproof and fade resistant material, the Temporary Marking Flags are available in wire, plastic, or fiberglass staffs, and in a wide variety of colors. Your custom message, company name, and logo can be imprinted, or choose from standard warning messages.

ANCHOR BARB KIT

Protection from theft

Designed for problem soil conditions, the Anchor Barb Kit has been developed for permanent anchoring of Carsonite markers in loose, sandy, or marshy soils. The flexible anchor barb collapses during installation, and expands upon attempted removal.

The Anchor Barbs give your posts a sure grip into the surrounding soil, preventing extraction, either accidental or vandal-related. These anchors can be factory installed when you order posts.

Also sold in kits of  
10 anchors with  
rivets for field  
application.

Available with  
composite (pictured  
below) or metal anchor.

## CARSONITE OPTIPED® SPLICE VAULT

**Durable and versatile.**  
The ultimate protection for fiber optic splices.

Carsonite's Optiped® below-ground splice vault provides the ultimate protection for fiber optic splices. The Optiped base can easily store more than 120 feet of cable, and is available with 2-inch or 4-inch cable ports.

The Optiped's patented design makes installation and splice maintenance a snap. Completely install the vault prior to installation of the splice case, to eliminate the need to leave an open pit. The Optiped exceeds AASHTO H<sub>2</sub>O loading requirements, so it's ideal for roadside installation.

The Optiped is available with a slotted base that allows relocation of the cable splice without disruption of service. Made of fiberglass reinforced composite, the Optiped Splice Vault will never corrode, decay, or crumble. Its lid is supplied with security screws to prevent tampering, as well as universal brackets for hanging the splice case.

The three-section barrels comprise three 9-inch sections. Additional sections may be added for a custom burial depth, or order a convenient single-section 30-inch barrel.

### Large Barrel Option

For use with today's large splice cases, the Optiped's optional 13-inch barrel modifies the vault to accept splice cases up to 12.5 inches outside diameter and up to 30 inches in length. This one-section (30-inch) fiberglass composite barrel features superior material strength, yet is light in weight, convenient, and easy to install.

Please allow 4 to 6 weeks lead time

## HOW TO ORDER

Each product has a product number, comprising a style, length and color code. Generally, products use the 4-3-2 principal. The system is:

**CHP3** \_ \_ \_ \_ \_

To specify a product, use the stem from the catalog and fill in the color, length, or other specifiers. Some product codes have additional numbers or letters at the end of the standard 9-digit code. For example, **CSS** \_ \_ \_ \_ \_ **U**. Simply fill in the blanks for the length and/or color and keep the characters that follow, if any.

A few products, such as installation tools, have a product number, and no additional information. For example, Post Driver **PDR1**.

### Sample product code

Let's say you want 280 units of our new 5.5' orange High-Performance Utility Markers with 3" x 12" orange high-intensity sheeting.

1. Take the product number stem and add the length you want, in inches. (**CHP3066** \_ \_)
2. Select a color and fill in its two-digit number. For orange, the color code is 04. So, the product code for the marker is **CHP306604**.

Now the sheeting.

3. For Carsonite's 3" wide high-intensity sheeting, the product code is **RSH30** \_ \_ \_ \_.
4. The sheeting length is specified by the first two digits after the product code (see page 15), **12** in this case. The orange color is **04**.

Done! When calling in your order, tell the Customer Service Representative you want 280 **CHP306604** with **RSH301204** applied.

If you have any questions about specifying Carsonite product numbers, call Customer Service at 1-800-648-7916. We will be happy to assist you.
